TITLE: Nikolay Nikolayevich Lutsenko (Obituary)

SOURCE: Elektrичество, no. 9, 1964, 93-94

TOPIC TAGS: electric engineering personnel

ABSTRACT: Doctor of Technical Sciences, Major General in the Technical Engineering Service, Professor N. N. Lutsenko died in May of this year after a long and serious illness. He graduated from the Moscow Higher Technical Academy in 1914 and was closely associated with his specialty of electrical engineering till the end of his life. He spent the first years of his practical activity at the Academy working in the electrical engineering laboratory of K. A. Krug. After that he began his career in the Soviet Army as a lowly laboratory assistant in the radiotechnical laboratory and worked his way up over thirty years to be head of the

Department of Electrical and Military Engineering. He wrote several books: "Alternating Currents," "The Theory of Alternating Currents," "Course in General Electrical Engineering," "Radio Engineering" and, together with his co-workers, problem books on "A Course in Alternating Currents" and "The Physical Principles of Electrical Engineering." He set up a number of special courses (military application of electric power, military portable electric power stations, electric equipment for armies, electrification of military engineering works, etc.) and also participated in many engineering projects with the Soviet Army. He has written many textbooks, monographs and articles on the theoretical and applied divisions of military electrical engineering. These include "Electric Circuits" and "Fundamentals for the Design and Planning of Mobile Electric Stations." Many of N. N. Lutzenko's students are working in sections of the Soviet Army, in scientific institutes and in colleges, and in industry. These students are continuing the work of their teacher, the founder of Soviet military electrical engineering. He received his professorship in 1938 and his doctorate in 1949. He has received the Order of Lenin, three "Red Banners," the Order of the "Red Star" and many medals. Orig. art. has 1 figure.

Principles of the calculation and design of electromechanical elements of automatic and remote control devices (Osnovy rascheta i proyektirovaniya elektromekhanicheskikh elementov avtomaticheskikh i telemekhanicheskikh ustroystv) Moscow, Izd-vo "Energiya," 1965. 575 p. illus., biblio. Textbook for students at institution of higher learning. 25,000 copies printed.

TOPIC TAGS: automatic control, remote control, electromagnet, automation equipment, automatic control equipment

PURPOSE AND COVERAGE: This book is intended to serve as a textbook for students at schools of higher technical education in the field of automatic and remote controls. It may also be useful for technical personnel in all branches of industry concerned with automation. The mechanical, thermal, electromechanical, and magnetic components encountered in automation and remote control for establishing continuity between the input and output signals by continuous and two-step conversion are considered. Considerable attention is paid to the problem of reliability. The general relationships which define reliability and the basic physical and physicochemical processes causing failures are investigated. The problems of the accuracy and stability of the components, also those related to the analysis

TITLE: Possibilities of automation of measurement processes 9M

SOURCE: Avtometriya, no. 1, 1965, 9-20

TOPIC TAGS: automation, measurement, measuring apparatus

ABSTRACT: An analysis of the possibility of automation of measurement processes for various areas of science and technical investigation. The principle parameters to be controlled, the main principles of construction of centralized measuring devices and methods for economical evaluation of the expediency of automation of measurements are presented. Automated devices, laboratories and stations are expedient for usage where: man cannot be, or cannot be for long (long interplanetary flights, in deserts, etc); there are many places to be measured over a wide area; many parameters must be measured simultaneously; long continuous monitoring is required; a complex program of actions must be performed with great accuracy; a great deal of data must be sorted for long periods of time; information obtained by measurement must be processed and acted upon rapidly. Automation in these areas will allow basic changes to be wrought in science and the economy. The Bibliography presents 13 (mostly American and other western) articles on the problem which the author describes as "interesting examples".

TITLE: Matrix elements in the β -decay of Ir¹⁹²

PERIODICAL: Czechoslovak Journal of Physics, Section B, v.13, no.1,
1963, 75-76

TEXT: Ir¹⁹² is an example of a first-forbidden β -transition for which there may, in general, be six different matrix elements. Experimental data for the polarization of Ir¹⁹² nuclei (B.N.Samoylov, et al: ZhETF, 36 (1959), 644) may be used to show that the asymmetry of the emitted β -particles relative to the nuclear spin directions for $v/c = 0.8$ and polarization $f_1 = 0.44$ is $a = -0.080 \pm 0.016$. The ξ -approximation was used to analyze experimental data for first-forbidden transitions. The above asymmetry is a result of the superposition of the $4^- \rightarrow 3^+$ and $4^- \rightarrow 4^+$ transitions. Since for Ir¹⁹² there appears to be no departure of the spectrum from the allowed form, it is considered that there are no appreciable Bij admixtures. In that case the transition $4^- \rightarrow 3^+$ will only involve the three matrix elements $\int r$, $\int \alpha$, $\int \sigma_{xr}$, and the relative contribution due to it will be

TITLE: A device for studying the gamma radiation of oriented nuclei

SOURCE: Jaderna energie, v. 10, no. 7, 1964, 243-246

TOPIC TAGS: gamma radiation, oriented nucleus, paramagnetic crystal, adiabatic demagnetization, one stage cryostat, liquid helium bath, vacuum casing, thermal insulation, scintillation spectrometer

ABSTRACT: The article describes a device with which a temperature on the order of 0.01°K was reached for the first time in the CSR in a paramagnetic crystal by adiabatic demagnetization, starting from a temperature of 1°K to which the crystal had been cooled. A one-stage cryostat and the experimental space with the sample were immersed in a liquid helium bath with a temperature of 4.2°K. Thermal insulation was insured by a vacuum casing. Vacuum apparatus, mostly of glass, served to evacuate the various spaces of the low-temperature apparatus and to ensure the liquid helium feed. In the verification of the operation of the whole device Co^{60} nuclei were oriented, set up directly in the cooling crystal of cerium magnesium

Card 1/2

L 26372-65

ACCESSION NR: AP4042144

5

nitrate.¹ Adiabatic demagnetization of this crystal was effected with a LAMA 80 electromagnet of a maximum field intensity of more than 20,000 gauss to zero field strength. The Co⁶⁰ nuclei were then oriented by the Bleany method. Gamma radiation was detected by single channel scintillation spectrometers in the $\theta = 0$ and $\theta = \pi/2$ directions. The temperature of the crystal after demagnetization was measured by the ballistic method from the change of its susceptibility. The dependence of the angular distribution of gamma radiation on temperature in Co⁶⁰ nuclei whose spins at the same temperatures had been oriented using the anisotropy of the internal field in a paramagnetic crystal was measured. The time dependence of the ballistic error and the characteristic curve W(0) and W($\pi/2$) after demagnetization were independently measured in the experiments. Comparison of both relations shows that experiment is in good agreement with theory in the temperature interval 0.05 to 0.10°K; at $T \leq 0.03$ °K the measured value is less than the theoretical value. The results obtained are in agreement with other experiments with Co⁶⁰ in which other methods of orientation were used, and confirm the correct functioning of the device. These methods for studying oriented radioactive nuclei enrich the fund of basic research in nuclear physics. "The authors express their thanks to their co-workers Novakov, Praskov, Rodov, and Sedirov in the building and testing of the apparatus." Orig. art. has: 6 formulas and 5 figures.

AUTHOR Souč, Juraš

TITLE: Explosions in the atmosphere; Sonic effects of shock waves

PERIODICAL: Kridla vlasti, no. 7, 1963, 190-192

TEXT: A popularized review of the mechanism of shock waves and sonic booms in supersonic flights, based on an article by N. A. Zaks, Docent and Candidate of Technical Sciences. [Abstracter's note: Original author's nationality, and publication data are not given.] Effects of sonic booms, by pressure intensity, are tabulated. Factors influencing sonic booms (Mach number, altitude, wind, angle of flight) are explained and graphically illustrated. 1 table and 5 graphs. 1 reference (to Zaks).

TITLE: Pulse reflectometer

PERIODICAL: Referativnyy zhurnal. Avtomatika i radioelektronika,
no. 5, 1962, abstract 5-7-174 t(Sb. praci Výzkumn
Ústavu spojů, 1959, Prague, 1960, 273-279)

TEXT: An apparatus is described, designed for the third TV channel, which is indispensable for operational measurements of the antenna and feeder (wave impedance of 50, 60 and 75 ohm), by the method of determination of the magnitude and point of reflection. In the pulse reflectometer a short radio frequency pulse (0.1 - 0.3 μ sec) is sent to the measured line; transmitted and reflected pulses are displayed simultaneously on the screen of a cathode ray tube. Instruction is given for the use of the apparatus in measurements of matching in antenna systems. [Abstractor's note: Complete translation].

ABSTRACT: In mice of the strain C₅₇ Black with transplanted leukemia LaH treated subcutaneously with 6-azauridine, 6-methylprednisolone semisuccinate and actinomycin D, the steroid had no effect at all. Actinomycin was most effective, prolonging survival 150% over the untreated controls. [JPRS]

ABSTRACT: Study of the effect of 6-methylprednisolone succinate, 6-mercaptopurine, buthiopurine, 6-azauridine, dehydroepiandrosterone and actinomycin D on experimental leukemia L14AKR. 6-azauridine increased the survival 150% of a control; actinomycin D was also very effective but it was accompanied by toxic effects, including subcutaneous abscesses and fall-out of hair.

"An Electrolytic Method for the Determination of Water Vapor Emitted by the Skin."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 4, Jul 66, pp 329-330

Abstract: Water contained in the analyzed gas is absorbed by a film of P_2O_5 , and immediately decomposed electrolytically to hydrogen and oxygen; the intensity of the electrical current used gives an instantaneous reading of the amount of the water, when a constant volume of the analyzed gas is maintained. The instrument is sensitive enough to allow investigations of small areas of the skin (1.10^{-8} to 1.10^{-5} g of water/sec can be determined). Overall diagram of the unit is given, and technical details of the component parts presented. 1 Figure, 6 Western, 4 Czech references. (Manuscript received 3 Feb 66).

AUTHOR: Souček, J.

TITLE: Coulometric micro-determination of hydrogen in compounds

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 4, 1963, 154, abstract
4G150 (Collect. Czechosl. Communs, v. 27, no. 4, 1962, 1024 -
1028 [Ger.; summary in Russ.])

TEXT: A coulometric method of determining H in organic compounds has been developed, based on combustion of the hydrogen, absorption of the resulting H₂O by a sorbent followed by its electrolytic decomposition (RZhKhim, 1960, no. 13, 51711) with determination of its amount from the electricity consumed. The H content (in %) in the sample is calculated from the formula:
$$X = 1.045 \cdot 10^{-3} m^{-1} \int_{t_0}^t [i(t) - i_0] dt$$
, where i is the current in ma, t is the time in sec, m is the weight of the sample in g, i₀ is the residual current due to traces of moisture in the O₂ and current leakage through the insulation. The design of the coulometric measuring element and the H₂O vapor

Coulometric micro-determination of...

absorber have been described earlier (J. Souček, Collect. Czechosl. Commun.). The combustion was carried out in an O_2 flow, previously dried by passing through an absorber containing silicagel and P_2O_5 . The combustion gases were passed into the coulometric element, and thence through a tube containing P_2O_5 for protection from atmospheric moisture, into the atmosphere, or into a CO_2 absorber. The amount of electricity consumed in electrolysing the water was found on an integrating meter (circuit given) from the current v. time curve. With this method the H content can be determined with an absolute error of 0.09%. [Abstracter's note: Complete translation.]
